English	B2

EDUCATION

V Liceum Ogólnokształcące,
Gdańsk

Math-Physics-CS track
2nd-year student, expected grad.
2028

PROFILE

Self-taught developer and systems administrator with 2+ years of hands-on experience running production infrastructure. Currently administer a live multi-service platform used by 300+ students, and co-build an AI-powered web application from architecture to deployment. Comfortable across the stack: backend APIs, databases, Linux server administration, and AI/automation tooling. Seeking a junior software engineering role to grow within a professional engineering team.

EXPERIENCE

Lead Developer & System Administrator — Tryton (school hosting platform)

2023 — Present

Independent project, V Liceum Ogólnokształcące, Gdańsk

- Designed, built, and operate a production web platform serving 300+ students, running on a self-managed Debian 12 server.
- Architected backend with FastAPI and MariaDB, containerized with Docker.
- Led a security hardening initiative: isolated the Docker socket via a proxy, migrated all containers to run as non-root users, and performed a full production data migration.
- Built a Discord bot integration, an in-platform economy/cosmetics system, and public user profiles with custom-generated avatars.
- Wrote internal handoff documentation to keep the project maintainable across long-term development.

Python · FastAPI · MariaDB · Docker · Linux · Discord API

Co-Founder & Developer — gift-helper.com (AI gift recommendation startup)

2025 — Present

Early-stage startup, co-developed with one partner

- Co-architected a full-stack monorepo (Turborepo, pnpm workspaces) with a Next.js frontend and a Nest.js API.
- Integrated an LLM-based recommendation engine to generate personalized gift suggestions.
- Set up GitLab CI/CD pipelines and Git hooks (Husky, lint-staged) to keep code quality consistent across the team.
- Working with PostgreSQL for data persistence across frontend/backend packages.

Next.js · Nest.js · JavaScript · PostgreSQL · Turborepo · GitLab CI/CD

Personal Project — AI News Pipeline

2025

- Built an automated content pipeline using n8n: aggregates multiple RSS feeds, filters and selects articles via a locally-hosted LLM, and auto-publishes formatted news posts to a Telegram channel.
- Self-hosted an open-source LLM (Ollama) optimized to use native GPU acceleration rather than running in a container.
- Iteratively tuned prompts and pipeline logic to fix source bias and improve factual accuracy of generated posts.

n8n · Ollama · LLM prompting · Workflow automation

OTHER PROJECTS

- Documentary Filmmaking** — Wrote, filmed, and edited an independent documentary on IT life at V LO, publicly screened in December 2025.
- Game Development** — Building a first-person project in Unreal Engine 5.
- Home Lab** — Run a Synology NAS and a Windows workstation (RTX 4070) alongside a MacBook for local AI inference, self-hosting, and development.
